

1  
the  
photoelectric effect  
and  
vitamin  
D3

UVB photons  
interact  
with  
cholesterol  
molecules in  
skin tissue to  
synthesize  
and  
sulfate /activate/  
vitamin D3  
which then  
circulates  
through  
blood plasma

the  
photoelectric  
effect  
and  
red  
blood  
plasma

red light  
charge-  
separates  
water in  
the cell,  
phaze  
shifting  
it into  
plasma.

water is a battery charged by  
electrons from the sun.
